Checking of the cylinder head assy. (2/3) for ROTAX® Engine Type 912 and 914 (Series)

This ASB revises ASB-912-062/ASB-914-044 Revision 1

ATA System: 72-30-00 cylinder head

Symbols used:
Please, pay attention to the following symbols throughout this document emphasizing particular information.

General note

⚠ WARNING Identifies an instruction which, if not followed, may cause serious injury or even fatal injury.

⚠ CAUTION Identifies an instruction which, if not followed, may cause minor or moderate injury.

NOTICE Denotes an instruction which if not followed, may severely damage the engine or could lead to suspension of warranty.

ENVIRONMENT NOTE

Environment note gives you tips and behaviors to environmental protection.

NOTE: Information useful for better handling.

A revision bar outside of the page margin indicates a change to text or graphic.

To obtain satisfactory results, procedures specified in this publication must be accomplished with accepted methods and prevailing government regulations.

BRP-Powertrain GmbH & Co KG cannot be responsible for the quality of work performed in accomplishing the requirements of this publication.

1) Planning information

1.1) Applicability

All versions of the engine type:

<table>
<thead>
<tr>
<th>Engine type</th>
<th>Serial number</th>
</tr>
</thead>
<tbody>
<tr>
<td>912 A</td>
<td>from S/N 4,410.965 up to S/N 4,410.976 inclusive</td>
</tr>
<tr>
<td>912 F</td>
<td>from S/N 4,413.013 up to S/N 4,413.017 inclusive</td>
</tr>
</tbody>
</table>
Additional engine S/N as per ASB-912-062/ASB-914-044 Revision 2:

<table>
<thead>
<tr>
<th>Engine type</th>
<th>Serial number</th>
</tr>
</thead>
<tbody>
<tr>
<td>912 S</td>
<td>from S/N 4,924.468 up to S/N 4,924.491 inclusive</td>
</tr>
<tr>
<td>914 F</td>
<td>from S/N 4,421.156 up to S/N 4,421.169 inclusive</td>
</tr>
</tbody>
</table>

In addition, also affected, all cylinder head assy. 2/3 part no. 623682 or part no. 623687 from 31 January 2013 up to 28 May 2013 inclusive.

1.2) Concurrent ASB/SB/SI and SL

   none

1.3) Reason

   Due to a deviation in the manufacturing process some cylinder heads may have an oil leak in the intake channel in the area of the valve guide. There is a possibility of small machined through holes, which can increase the oil consumption which may result in an engine stoppage.

1.4) Subject

   Checking of the cylinder head assy. (2/3) for ROTAX for engine type 912 and 914 (Series).

1.5) Compliance

   - before next flight, check of the cylinder head assy. 2/3 part no. 623682 or part no. 623687 of an engine with a serial number (S/N) listed in section 1.1) in accordance with the instructions in section 3.

   NOTE: If an inspection as per ASB-912-062R1/914-044R1 have already been carried out, no further inspection is necessary.

   Non-compliance with these instructions could result in engine damages, personal injuries or even fatal injury.

1.6) Approval

   The technical content of this document is approved under the authority of DOA ref. EASA.21J.048.

1.7) Labor time

   Estimated labor time:

   - engine installed in the aircraft - - - labor time will depend on installation and therefore no estimate is available from the engine manufacturer.

1.8) Mass data

   - change of weight - - none.

   - moment of inertia - - unaffected.
1.9) Electrical load data
no change

1.10) Software accomplishment summary
no change

1.11) References
In addition to this technical information refer to current issue of
- Illustrated Parts Catalog (IPC)
- Maintenance Manual (MM)
NOTE: The status of Manuals can be determined by checking the table of amend-
ments of the Manual. The 1st column of this table is the revision status. Compare this number to that listed on the ROTAX® WebSite:
www.FLYROTAX.com. Updates and current revisions can be downloaded for free.

1.12) Other Publications affected
none

1.13) Interchangeability of parts
- All defective parts and also spare parts in stock are unservicable and must be returned F.O.B
to ROTAX® Authorized Distributors or their Service Center.

2) Material Information

2.1) Material- cost and availability
Price, availability and any possible support will be provided on request by ROTAX® Authorized
Distributors or their Service Center.

2.2) Company support information
- Replaced parts must be returned F.O.B to ROTAX® Authorized Distributors or their Service
Center.
- Shipping costs, downtime costs, loss of income, telephone costs etc. or costs of conversion to
other engine versions or additional work, as for instance simultaneous engine overhaul is not
covered in this scope and will not be borne or reimbursed by ROTAX®.

2.3) Material requirement per engine
parts required if cylinder head change is necessary:

<table>
<thead>
<tr>
<th>Fig. no.</th>
<th>New part no.</th>
<th>Qty/ engine</th>
<th>Description</th>
<th>Old part no.</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>

**NOTICE**

When using these special tools observe the manufacturers specifications.
3) Instructions/Accomplishment

NOTE: Before maintenance, review the entire documentation to make sure you have a complete understanding of the procedure and requirements.

Accomplishment

All measures must be taken and confirmed by at least one of the following persons or organization:
- ROTAX® - Airworthiness representative
- ROTAX® - Distributors or their Service Center
- Persons approved by the respective Aviation Authority

NOTE: All work has to be performed in accordance with the relevant Maintenance Manual.

Safety notice

⚠️ WARNING
Proceed with this work only in a non-smoking area and not close to sparks or open flames. Switch off ignition and secure engine against unintentional operation. Secure aircraft against unauthorized operation. Disconnect negative terminal of aircraft battery.

⚠️ WARNING
Risk of scalds and burns! Allow engine to cool sufficiently and use appropriate safety gear while performing work.

⚠️ NOTICE
Should removal of a locking device (e.g. lock tabs, self-locking fasteners, etc.) be required when undergoing disassembly/assembly, always replace with a new one.

3.1) Checking of cylinder head assy. 2/3

3.1.1) Introduction

This check has to be done in order to establish if there is evidence of excessive oil consumption. New or used engines have to be checked by examining for this evidence as detailed under 3.1.2) Checking of spark plug tip on cylinder 2 and 3.
3.1.2) Checking of spark plug tip on cylinder 2 and cylinder 3

See fig. 1.

NOTE: If the cylinder heads 2/3 part no. 623682 or part no. 623687 have already been installed in the course of a repair / an overhaul, carry out an engine test run (a minimum engine running time of 20 minutes is required). This must be done prior to the checking of the spark plug tip.

See current issue of Maintenance Manual (Line) of the relevant engine type.

<table>
<thead>
<tr>
<th>Step</th>
<th>Procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Visual check of both spark plugs per cylinder (top and bottom).</td>
</tr>
</tbody>
</table>

NOTE: Unusual deposits (excessive carbon or oil) on the spark plugs are an indication of a defective cylinder head which must be replaced. Figure 1 shows comparison between a used spark plug in normal condition and one that is not.

**NOTICE** Affected spark plugs with such deposits shown in chapter 4 Fig. 1, have to be removed and can not be reinstalled.

3.1.3) Replacement of the affected cylinder head

If excessive deposits (oil or carbon) are found on the spark plugs the cylinder head must be replaced in accordance with the relevant Maintenance Manual (Heavy) and any relevant aircraft manufacturer instructions.

NOTE: At tightening the cylinder head with 2 collar cap nuts M8 and 2 hex. nuts M8 pay attention to the changed tightening torque. Tighten to 10 Nm (90 in.lb) and then in addition tighten further by applying a 120° rotation.

- Install new spark plugs.
- Restore aircraft to original operating configuration.
- Connect negative terminal of aircraft battery.

3.2) Test run

Conduct test run including ignition check and leakage test

3.3) Summary

These instructions (section 3) have to be conducted in accordance with the time scales specified in section 1.5. The execution of the mandatory Alert Service Bulletin must be confirmed in the logbook.

Approval of translation to best knowledge and judgement—in any case the original text in German language and the metric units (SI-system) are authoritative.

3.4) Enquiries

Enquiries regarding this Alert Service Bulletin should be sent to the ROTAX® authorized distributor of your area. A list of all distributors is provided on www.FLYROTAX.com.
4) Appendix

The following illustrations/drawings should convey additional information:

NOTE: The illustrations in this document show the typical construction. They may not represent full detail or the exact shape of the parts which have the same or similar function.

Exploded views are not technical drawings and are for reference only. For specific detail, refer to the current documents of the respective engine type.
