SERVICE BULLETIN
EXTENSION OF TIME BETWEEN OVERHAULS (TBO)
FOR ROTAX® ENGINE TYPE 912 AND 914 (SERIES)

Repeating symbols
Please, pay attention to the following symbols throughout this document emphasizing particular information:

▲ WARNING: Identifies an instruction, which if not followed, may cause serious injury or even death.
■ CAUTION: Denotes an instruction which if not followed, may severely damage the engine or could lead to suspension of warranty.
◆ NOTE: Information useful for better handling.

A revision bar outside of the page margin indicates a change to text or graphic.

1) Planning information

1.1) Engine affected

a) Extension of TBO is already valid for engine type 912 A/F/S (Series) from 1200 h to 1500 h or from 10 years to 12 years period of operation for all engines of type:
   - 912 A from S/N 4,410.472 to S/N 4,410.856
   - 912 F from S/N 4,412.817 to S/N 4,412.974
   - 912 S from S/N 4,922.777 to S/N 4,923.889
   provided the 1000 h special check has been performed. Refer to section 3.3).

b) Extension of TBO is already valid for engine type 914 F (Series) from 1000 h to 1200 h or from 10 years to 12 years period of operation for all engines of type:
   - 914 F from S/N 4,420.314 to S/N 4,420.908

c) For all engine S/N lower than given a) and b) a TBO extension, to 1000 h, 1200 h, 1500 h or from 10 years to 12 years period of operation, according to the Service Bulletins mentioned in chapter 3) can be effected. Prerequisite for that is accomplishment of all specified and appropriate Service Bulletins as well as modifications stated in section 3.2), 3.3), and 3.4).

1.2) Concurrent ASB/SB/SI and SL

In addition to this Service Bulletin the following additional Service Bulletins must be observed and complied with:
   - SB-912-004, “TBO increase 1000 h”, current issue.
   - SB-912-014, “TBO increase 1200 h”, current issue.
   - SB-912-027/SB-914-010, “Checking or replacement of the propeller gearbox”, current issue.
   - SB-912-031, “Checking or replacement of the fuel pump assy. part no. 996596”, current issue.
1.3) **Reason**
A program for extending the period of operation was carried out in agreement with the type Certificate Authori-
ty Austro Control GmbH (ACG). The TBO (engines concerned see section 1.1) can be extended on ac-
count of the positive results of the examined engines.

1.4) **Subject**
Extension of time between overhauls (TBO) for ROTAX® Engine Type 912 and 914 (Series).

1.5) **Compliance**
At release of this Service Bulletin.

1.6) **Approval**
The technical content is approved under the authority of DOA No. EASA.21J.048.

1.7) **Manpower**
none

1.8) **Mass data**
change of weight - - - none.
moment of inertia - - - unaffected.

1.9) **Electrical load data**
no change

1.10) **Software accomplishment summary**
no change

1.11) **References**
In addition to this technical information refer to current issue of:
- Operators Manual (OM)
- all relevant Service Bulletins (SB)
- Maintenance Manual (MM)

◆ NOTE: The status of Manuals can be determined by checking the table of amendments of the Manual. The 1st column of this table is the revision status. Compare this number to that listed on the ROTAX WebSite: www.rotax-aircraft-engines.com. Updates and current revisions can be downloaded for free.

1.12) **Other publications affected**
not affected

1.13) **Interchangeability of parts**
not affected
2) Material Information

2.1) Material - cost and availability
Price and availability will be supplied on request by ROTAX® Authorized Distributors or their Service Center.

2.2) Company support information
- Shipping cost, down time, loss of income, telephone costs etc. or cost of conversion to other engine versions or additional work, as for instance simultaneous engine overhaul is not covered in this scope and will not be borne or reimbursed by ROTAX®.

2.3) Material requirement per engine
Parts requirement:
Depending on the engine modification state (see chapter 3).

2.4) Material requirement per spare part
none

2.5) Reworks of parts
none

2.6) Special tooling/lubricant-/adhesives-/sealing compound
Price and availability will be supplied on request by ROTAX® Authorized Distributors or their Service Centers.
Parts requirement:
- according relevant Maintenance Manual.

■ CAUTION: When using special tools observe the manufacturer’s specifications.
3) Accomplishment / Instructions

Accomplishment
All the measures must be taken and confirmed by the following persons or facilities:
- ROTAX® -Airworthiness representative
- ROTAX® -Distributors or their Service Centers
- Persons approved by the respective Aviation Authority

⚠️ WARNING: Proceed with this work only in a non-smoking area and not close to sparks or open flames. Switch off ignition and secure engine against unintentional operation. Secure aircraft against unauthorized operation. Disconnect negative terminal of aircraft battery.

⚠️ WARNING: Risk of scalds and burns! Allow engine to cool sufficiently and use appropriate safety gear while performing work.

⚠️ WARNING: Should removal of a locking device (e.g. lock tabs, self-locking fasteners, etc.) be required when undergoing disassembly/assembly, always replace with a new one.

 ✓ NOTE: All work has to be performed in accordance with the relevant Maintenance Manual.

3.1) General
A program for extending the period of operation (extension of the TBO) for engines from a certain manufacturing period and onward has been introduced. For engines which have already been accepted into this program, see section 1.1a) and b).
However, engines not listed in section 1.1a) and b) can increase the TBO according to the following instructions.
The following table gives an overview of the current engine TBO status at the time of delivery and the associated SB’s that, if complete with, can allow. TBO’s of 1000 h, 1200 h or 1500 h to be reached accordingly.

<table>

</tbody>
</table>

Table 1
An extension of the TBO is possible and regulated by the Service Bulletin (SB) complied with for the respective engine type. Respective engine SB’s that have already been complied with should be verified by the technical records such as the engine log book and/or the release certificate.

### 3.2) Extension of the TBO

An extension of the TBO for applicable is basically possible according to table 1. A necessary prerequisite would be the implementation of all relevant Service Bulletins or Service Instructions. See section 1.2.

- **CAUTION:** An engine may be affected again by a previous modification. Retrieve the necessary information from the respective maintenance documents or the engine log book.

The SB’s or SI’s to be performed are assigned to the respective engine S/N ranges. All SB’s or SI’s need to be carried out in ascending order.

- **NOTE:** You need to keep the correct sequence and order to attain an extension of the TBO according to the respective engine types (600 h to 1000 h, 1000 h to 1200 h and 1200 h to 1500 h).

### 3.3) Inspecting the propeller gearbox 912 S (Series)

- **NOTE:** All engines of type 912 S (Series) need to receive a inspection of the propeller gearbox at 800 h TSN. If a TSN of 1000 h has already been exceeded the check must be done at the next 100 h inspection. Perform check according to the latest relevant Maintenance Manual (see chapter 12-00-00 section 7.2).

</tbody>
</table>
3.4) Extension of TBO from 1200 h to 1500 h according to SB-912-041/SB-914-027

An extension of the TBO according to SB-912-041/SB-914-027 is possible provided all stated retrofits (if applicable) are performed.

The following list gives an overview for which engine or S/N the modifications mentioned have already been introduced in series production.

The components on the affected engines need to be retrofitted to extend the TBO. Besides the part no. also the Amendment Modification (AM) number per engine type is stated. The respective AM numbers can be taken from the maintenance documents or the engine log book and FORM ONE.

◆ NOTE: Check the technical records to see if the components listed (propeller shaft, dog hub and circlip) have already been upgraded for any reason (maintenance, repair etc.) if they have, they do not have to be replaced again for the purpose of this SB.

3.4.1 Propeller shaft

Installation of a propeller shaft with additional lubricating bore is required for TBO extension.

◆ NOTE: Only applicable for engines of configuration 3 (912 A3, 912 F3, 914 F3). Take this into account when re-retrofitting Series 4 to 3 or Series 2 to 3.

Following engines are affected:
- 912 A up to S/N 4,410.266 or gearbox up to S/N 14194
- 912 F up to S/N 4,412.764 or gearbox up to S/N 14194
- 914 F3 up to S/N 4,420.085 or gearbox up to S/N 14194

This modified propeller shaft has already been installed on engines beyond this S/N.

The amendment modifications (AMs) that have been introduced into series production after the above mentioned time of modification can be identified in the technical records or FORM ONE by using the following table.

<table>
<thead>
<tr>
<th>Propeller shaft part no. 837283</th>
<th>or</th>
<th>Propeller shaft part no. 837284</th>
</tr>
</thead>
<tbody>
<tr>
<td>912 A 48-02</td>
<td></td>
<td>912 A 52-02</td>
</tr>
<tr>
<td>912 F F13-02</td>
<td></td>
<td>912 F F17-01</td>
</tr>
<tr>
<td></td>
<td></td>
<td>912 S S01-15</td>
</tr>
<tr>
<td>914 F F06-03</td>
<td></td>
<td>914 F F11-02</td>
</tr>
</tbody>
</table>

3.4.2 Dog hub

To extend the TBO, installation of a dog hub with 30° backlash (instead of 15°) is required.

Following engines are affected:
- 912 A from S/N 4,410.066 up to S/N 4,410.366 or gearbox from S/N 11910 to S/N 15527
- 912 F from S/N 4,412.586 up to S/N 4,412.791 or gearbox from S/N 11899 to S/N 15527
- 914 F from S/N 4,420.001 up to S/N 4,420.156 or gearbox from S/N 11899 to S/N 15527

This modified dog hub has already been installed on engines before or beyond these S/N ranges.

◆ NOTE: Type 912 S was manufactured with 30° dog hub from start of series production and is therefore not affected.
The amendment modifications (AMs) that have been introduced into series production after the above mentioned time of modification can be identified in the technical records or FORM ONE by using the following table.

<table>
<thead>
<tr>
<th>Dog hub part no. 958920 with 30°</th>
</tr>
</thead>
<tbody>
<tr>
<td>912 A</td>
</tr>
<tr>
<td>912 F</td>
</tr>
<tr>
<td>914 F</td>
</tr>
</tbody>
</table>

3.4.3  Circlip SB 70

To extend the TBO, installation of a circlip SB 70 part no. 845425 is necessary. See also SI-912-006/ SI-914-008, latest edition.

Following engines are affected:
- 912 A up to S/N 4,410.429
- 912 F up to S/N 4,412.809
- 912 S up to S/N 4,922.660
- 914 F up to S/N 4,420.267

This modified circlip SB 70 has already been installed on engines beyond this S/N.

The amendment modifications (AMs) that have been introduced into series production after the above mentioned time of modification can be identified in the technical records or FORM ONE by using the following table.

<table>
<thead>
<tr>
<th>Circlip SB 70 part no. 845425</th>
</tr>
</thead>
<tbody>
<tr>
<td>912 A</td>
</tr>
<tr>
<td>912 F</td>
</tr>
<tr>
<td>912 S</td>
</tr>
<tr>
<td>914 F</td>
</tr>
</tbody>
</table>

- Restore aircraft to original operating configuration.
- Connect negative terminal of aircraft battery.

3.5) Test run

Conduct test run including ignition check and leakage test in accordance with the current Maintenance Manual of the respective engine type.

3.6) Summary

These instructions (section 3) have to be conducted in accordance with compliance in section 1.5. The execution of the Service Bulletin must be confirmed in the logbook.

▲ WARNING: Non-compliance with these instructions could result in engine damage, personal injury or death!

Approval of translation to best knowledge and judgement - in any case the original text in German language and the metric units (SI-system) are authoritative.

4) Appendix
